**These slides should be read in conjunction with the Main Note 1296463, which contains a list of important related notes.**

**Please note:**

- This matrix shows generic NetWeaver support only and does not make statements about browser support in specific applications.
- Browsers based on Firefox engine will be supported „as-is“, i.e., the reference for SAP support is Firefox only.
- In general, the highest available patch level of a browser is recommended (for communication correctness, security, etc.).
- Client platforms are supported in 32bit mode only.
- Windows 2000 is only supported on the client, not on the server. For more information, please read the detailed information on client support in PPMS.
- Once a browser (version) or platform is no longer supported by the manufacturer, SAP will remove it from these slides.
